

Accurint® for Health Care

Segments risk throughout the claims process with comprehensive verification, validation and authentication solutions.

Gain greater insight and faster information validation at each step of the claim process.

Professional insurance managers strive for correct and proper claim outcomes. However, there are many obstacles throughout a claim lifecycle from point of service to outcome that can result in lost time, revenue, missed subrogation and even HIPAA compliance violations. Obstacles can include: patient impersonation (card sharing); provider and supplier waste and abuse; and undetected false data, intentional and unintentional.

Your first line of defense is our new Accurint® upgrade... a more powerful fraud detection, identification and investigation tool.

Now you can instantly verify, validate and authenticate health plan member, provider and supplier information including businesses and assets. Accurint® linking technology reveals undisclosed relationships and potentially illegitimate self referrals such as physicians sending patients to medical facilities in which they have a financial interest.

Accurint® for Health Care can be used from point of service through claim outcome.

 LexisNexis®

Actionable intelligence to make critical decisions throughout your customer lifecycle.

Online Record Retrieval Request Features available through a secure web site 24/7.

A fast and efficient way to order, track and retrieve records for your insured's medical history verification* and claim handling needs. Coverage is nationwide.

- Canvassing to determine if an undisclosed medical event or pre-existing condition exists
- Employment/Business Records retrieval to assist with loss of earnings claims
- Subpoena capability for litigation support

Enhanced *Accurint*® also assists with more effective collection and subrogation strategies.

Accurint® helps point the way to potential third-party liability for claims payment, partial or in full. Individuals and employers tend to identify health insurance as the one and only coverage for illness and accidents, when, in fact, many claims are for workers' compensation injuries sustained on the job, and others can be automobile insurance liabilities.

Credentialing, screening and ongoing monitoring complete the circle of safeguards.

Insurance companies assume the liability for employees who deal with patients' protected health information and outsourced relationships such as plan panel physicians to medical equipment suppliers, plus hospitals, clinics, laboratories, imaging centers, pharmacies and PT/OT providers. Absent ongoing monitoring, carriers can be blind-sided by medical board sanctions and criminal activities occurring after initial credentialing. *Accurint*® minimizes new discoveries which can be costly and embarrassing.

SIRIS - Special Investigation Resource and Intelligence System.

National Health Care Anti-Fraud Association (NHCAA) members can link to the new generation of SIRIS to share critical health care fraud and schemes information.
