

LexisNexis® Batch Collections Solutions

Boost Contact Rates and Recover Debt More Efficiently at Every Point in the Collections Cycle

Comprehensive data, advanced technology and experience combine to help you work smarter. In today's ever-changing world of collections, you have to work smarter, quicker and more decisively to locate debtors, identify unproductive accounts and recover outstanding assets at every stage in the collections cycle. And you need seamless integration with your current collections processes.

LexisNexis® Batch Collections Solutions offer powerful tools that will help you increase right-party contact, shorten collection time, minimize your risk and increase operational efficiency. With its comprehensive, independent data sources—comprised of more than four billion credible name, address and phone number records, including relatives and neighbors—Batch Collections Solutions leverage advanced data-linking technology to automatically flag, scrub, manage and monitor changes in debtor information.

Highly Customized Processes Enhance Productivity

Customized to your needs, Batch Collections Solutions reduce manual searches, decrease unproductive calling and better allocate your skip tracing resources. You'll save time and make informed decisions with the solutions that help you:

- Update addresses before sending notices to lower returned mail and postage costs
- Update telephone numbers before loading into the dialer
- Obtain address and phone history for skip tracing
- Eliminate unproductive call attempts by identifying bankruptcy and deceased accounts before the call is made

Comprehensive Data Solutions

Our Batch Collections Solutions are customized to work with the information and format you need. And with all potential contact points in a single solution, you'll use your time more productively, as you leverage the following data:

- Multiple Personal and Business Locators
- Bankruptcies
- Liens
- Judgments
- Incorporations
- Death Records
- Professional Licenses
- Motor Vehicle Registrations
- Drivers' Licenses
- Real Property—over 2,000 counties

LexisNexis® Account Monitoring Works Seamlessly and Flexibly with Your Portfolio to Keep You Current

Our Account Monitoring feature integrates seamlessly with your current batch application, so you automatically receive daily updates on telephone numbers, addresses and emergence from bankruptcy directly from the source, rather than from “self-reporting” data. No need to resubmit accounts or whole portfolios. Account Monitoring maintains your portfolio and sends alerts for the changes you specify.

Telephone Numbers and/or Addresses

You get what you request, as you tap into multiple telephone sources and multiple person locator directories. Select a single “best” phone number or an extensive waterfall process that will return one or multiple phone numbers and addresses to locate your debtor.

Additional Skip Trace Searches

Additional skip trace searches return information about relatives, associates, roommates, and neighbors. We can enhance any process with supplementary data, including reverse telephone searches, to help you find your debtor.

Improve Productivity with Time-Saving Batch Solutions

The unparalleled combination of data resources and expert consultants can be harnessed to add value to your organization's processes and improve the efficiency of your operation.

When it comes to providing large-volume data solutions, LexisNexis knows “one-size” does not fit “all.” As a valued resource of comprehensive, reliable information, we've learned that your needs and applications for information can be unique. We are committed to providing Batch Solutions that fit your specific needs.

Our Batch Consultants Know Your Business and Our Data Builds Your Confidence

Dedicated LexisNexis Batch Consultants are specialists in collections processes, so you're assured of solutions best suited to the way you do business. From custom solution development through implementation and beyond, your batch consultant is at your side. You can count on dedicated support to help you customize your requirements from data needs to input and output delivery methods.
