Traditional credit data may not give a detailed-enough picture to assess risk for consumers with little to no information in their credit file.

The traditionally unscorable consumer population (including 25 M credit invisible or no-file consumers and 28 M thin file consumers) equates to the total population of the top

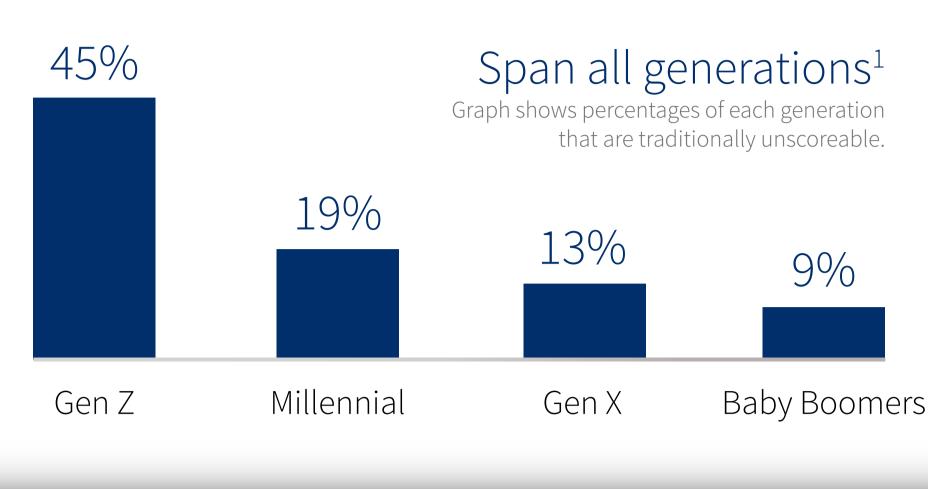

50 largest U.S. cities combined²

UNSCORABLE CONSUMERS

A CLOSER LOOK AT TRADITIONALLY

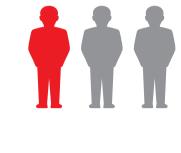

Credit invisibles are a diversified group. They are property owners, immigrants, and widowers — all with varying degrees of education.¹

African American and Hispanic populations have a substantially lower rate of credit visibility using
