An Evolving and Complicated Modernization Outlook

Citizens expect the same level of convenience as they do in the private sector. Challenges remain in building a integrated modernization foundation to deliver on that promise. To address those challenges, agencies face:

- IT modernization failures
- Difficulty integrating and consolidating old systems
- High cost of ongoing maintenance
- Difficulty finding employees with specialized knowledge and experience
- A workforce that lacks relevant training or certifications
- Languages.

According to NASCIO, legacy “systems. These systems were designed using a technology and programming languages.
