**LexisNexis Risk Solutions UK Limited**

**2020 UK GENDER PAY GAP REPORT**

**INTRODUCTION**

Under UK legislation (the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017), companies with 250 or more employees in Great Britain are required to publish specified UK gender pay gap statistics. LexisNexis Risk Solutions UK Limited is the UK employing entity for LexisNexis Risk Solutions, a global company which harnesses the power of data and advanced analytics to provide insights that help businesses and governmental entities reduce risk and improve decisions to benefit people around the globe.

LexisNexis Risk Solutions UK Limited employs around 450 people in Great Britain, representing approximately 5% of Risk’s global employee population. This report for LexisNexis Risk Solutions UK Limited is published in accordance with the UK legislation.

**THE UK GENDER PAY GAP REPORTING REQUIREMENT**

The UK gender pay gap is different from equal pay. The UK gender pay gap measures the overall difference between the average pay received by men and the average pay received by women in a workplace. It therefore reflects the different number of men and women at varying levels of seniority and doing different roles. The UK gender pay gap does not measure or compare pay in like-for-like roles. By contrast, equal pay is a legal requirement in the UK to pay men and women the same for equal or similar work. LexisNexis Risk Solutions UK Limited is committed to equal pay and has policies in place to pay employees fairly for the role they do, irrespective of their gender. A UK gender pay gap can exist despite men and women being paid equally for the same or similar roles.

The reason for the total pay gap at LexisNexis Risk Solutions UK Limited is that there is a higher proportion of men to women in the top half of the pay scale than in the lower half, as illustrated by the pay quartile statistics below. Many factors contribute to this. For example, as a growing information and analytics business, LexisNexis Risk Solutions UK Limited relies on talent with technology and analytics skills and those with industry expertise in sales and product management. These functional areas currently attract more men than women.

The bonus pay gap statistics reflect the fact that opportunities to receive performance-related pay (for example annual and share-based incentives and sales commission) increase with seniority and the more senior the population, the higher the proportion of men to women.

**THE ACTIONS WE ARE TAKING GLOBALLY**

LexisNexis Risk Solutions is committed to creating a diverse and inclusive workplace. To learn more about our policy and initiatives, including our efforts to increase representation of women in senior roles, please click [here](#).

Mean bonus pay gap 64.9%
Median bonus pay gap 61.3%

I confirm that the information and data provided in this report is accurate and in line with the UK legislation.

Katherine Lunn, EVP Human Resources and Corporate Services.

**Notes:**

1. The pay quartiles show the gender distribution across LexisNexis Risk Solutions UK Limited. Each pay quartile contains a quarter of the total LexisNexis Risk Solutions UK Limited employees, who were ranked from highest pay (upper quartile) to lowest pay (lower quartile).
2. The total pay gap is based on employees’ hourly rate of pay, calculated using their ordinary pay and any bonus pay received in April 2020. Ordinary pay includes regular pay (e.g. base salary and allowances). Bonus pay includes all types of incentive pay (e.g. annual bonus, commission, share-based award payout and option exercises).
3. The proportions of men/women receiving bonus pay and the bonus pay gap are based on bonus pay received in the 12 months to 5 April 2020.
4. The mean is calculated by adding up the values and then dividing by the number of values.
5. The median is found by listing the values in order and finding the middle number in the list (or, if there are equal numbers, the mean of the two middle numbers).
