

LexisNexis® Trail Tracker™ for Program Integrity

Document, manage, and expedite investigations seamlessly for optimal results.

With more than 4 billion health insurance claims processed annually in the United States, and a significant number of those claims fraudulent, program integrity investigators need automation to successfully manage the workload.

In today's complex world of fraud, waste, and abuse, program integrity departments have been hampered by antiquated manual processes, which are unable to efficiently manage cases from referral to close in a fast-paced, digital, and automated environment.

What government agencies need are today's automated tools, and LexisNexis® has a solution designed with government payers in mind – the Trail Tracker™ electronic file and investigation management system.

Staying on Track

Trail Tracker is an advanced improper payment recovery system built exclusively for investigations that builds documents and manages fraudulent claims through investigation, prosecution, and settlement.

LexisNexis Trail Tracker works across all health care claim types, including medical, facility, pharmaceutical, and dental. The easy-to-use interface enables investigators to plan a course of action for each investigation, identify activities needed, document investigations, create reminders, and manage records. The workflow enablers include tracking cases by status, tracking referral tips, assigning claims to departments for review, assigning cases to investigators, and managing investigator workloads.

Trail Tracker also gives the Special Investigative Unit (SIU), Program Integrity, or Compliance Departments means to measure investigative progress on files, trace recoveries effectively, and savings and create reports on unit activities.

Tracking with Ease

In addition, Trail Tracker enables investigators to seamlessly interface with numerous departments within the agency, as well as a variety of outside entities, such as local, state and federal law enforcement agencies; Office of the Inspector General; and the Centers for Medicare & Medicaid Services. Agencies can also interface with providers, patients, and pharmacies enabling more informed decision making. Because each State has its own policies and procedures regarding investigation protocols and claim adjudication, the system is designed for maximum flexibility in configuration.

Easing the Stress

Trail Tracker manages formerly tedious, manual tasks electronically with an efficient, organized system that takes investigations from referral to closure with a series of Investigative View screens that guide and document the complete effort.

To heighten its benefits, Trail Tracker also can work in conjunction with other LexisNexis products, including PrePayment Manager™, which acts as a command center for avoiding the payment of potentially fraudulent claims, and Intelligent Investigator™, an advanced fraud prevention system designed exclusively for health care program integrity investigative teams.

Stressing Success

With Trail Tracker, program integrity units can:

- Build solid cases for full-scale investigations more quickly and easily.
- Ensure consistency of investigative processes.
- Document and share information relating to investigations.

- Eliminate manual inefficiencies, such as illegible handwritten notes or lost documentation.
- Report on progress and results with minimal additional effort.

Additionally, investigative units and departments benefit from:

Consistency. The use of Trail Tracker helps guarantee that all cases are investigated and evidence is gathered in a consistent manner.

Increased efficiency. The use of Trail Tracker enables fewer resources to perform more tasks and speeds up the investigative process.

Security. When you work with LexisNexis, you can rest assured that your data is secure and is never shared.

With Trail Tracker, investigative divisions can work better, faster, and more effectively in the fight against health care fraud resulting in increased recoveries.
