

COVID-19 is helping cancer win.

Stay safe, don't stay away ... *because cancer doesn't stay at home.*

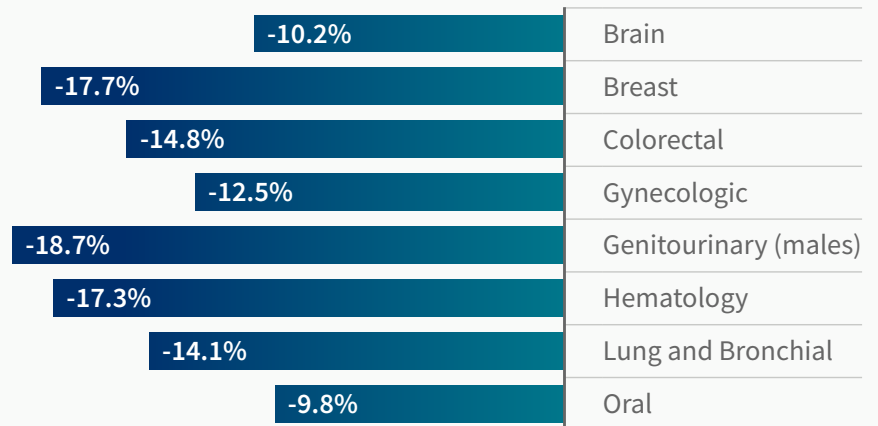

Our data is pointing to an alarming trend of **patients postponing cancer screenings**. Early detection greatly increases chances for successful treatment, so these delays in diagnoses will likely lead to presentation at more advanced stages and worse clinical outcomes.¹

MILLIONS ARE AT RISK DUE TO DELAYED CANCER SCREENING²

Cancer screenings plummeted during stay-at-home orders

Leading to drastic drops in newly diagnosed cancer patients

It's time to reverse this trend. **Help us stop the progression of cancer before it's too late.** Remind patients about the importance of regular screenings to improve clinical outcomes.
