Aerial imagery provides cost-effective insights about roof characteristics and condition.

However, imagery is not perfect:

Underwriting is the next frontier for aerial imagery analytics. While 100% of the top 50 carriers surveyed use aerial imagery in the claims process, only 36% use the technology in the underwriting process.*

To take aerial imagery to the next level, you need context from claims data.

Analysis of both property and auto claims within a geographic area can add valuable insight to pinpoint homes that are likely to have roof damage.

30X

A recent industry study showed that properties with the highest risk scores had 30x the claim rate compared to properties with the lowest risk scores.
