

## Put the right touch on every claim.

Know when to fast track, triage or more closely review claims.

As automated claims processing capabilities become more mainstream, the insurance industry is increasingly moving toward lower-touch claims handling.

That's great for workflow efficiency, but how can you ensure you're giving the appropriate attention to each claim?

LexisNexis® Claims Clarity allows insurers to move claims faster, with confidence.

In addition to delivering greater visibility into the parties and vehicles in a claim, Claims Clarity:

- **Enables speed.** It delivers actionable data in near real-time into the claims workflow, avoiding delays from batch processes or information gathering.
- **Is robust.** It leverages the most expansive sets of data, and you can utilize the data elements you choose in your claims workflow.
- **Delivers more accurate data.** Claims Clarity utilizes our proprietary linking and unique identifier technologies so you know you're acting on the right information.

Claims Clarity draws from multiple data sources, including:

Claim counts by coverage

Public record data

Police reports associated with a party

Count of police reports associated with a VIN

Stolen vehicle reports associated with a VIN

Police reports with similar vehicle damage loss information

LexisNexis Claims Clarity delivers value and benefits to carriers by allowing them to:

**Process claims faster.**

Know when to fast track, triage or more closely review claims with near real-time, actionable data.

**Improve the customer experience.**

Identify claim types earlier and connect with customers whose claims require more attention.

**Leverage expansive data sets.**

Choose from the most robust sets of data and choose the data elements that fit your models.

**Make decisions with confidence.**

Utilize more accurate data to receive historical information on the parties and vehicles involved in a claim.

**Empower adjusters.**

Put critical information at your adjusters' fingertips and spend less time gathering data and reviewing reports.

**Enhance predictive modeling.**

Take advantage of a wealth of actionable data to improve predictive models and automate more processes.
