

Intelligence for Decisions That Matter

POWERFUL AI OPTIMIZED FOR GOVERNMENT

AI-powered technology +
AI-enhanced data and intelligence

LexisNexis® Risk Solutions applies AI across our technology and intelligence capabilities to help government agencies connect information, uncover relationships, improve precision, and identify meaningful signals. **The difference is how it all works together:** definitive data provides the foundation; AI and advanced analytics can turn complexity into insight; and purpose-built technology applies that intelligence to real government challenges.

That's the Power of One: data, intelligence and technology working together to help agencies make better-informed decisions with greater clarity and confidence.

Precision. Transparency. Accountability.

Because an Output Isn't Enough

AI can surface an insight. For consequential government decisions, people may also need to understand what supports it.

- ✓ Where did the information come from?
- ✓ Why was it surfaced?
- ✓ Can the result be understood?
- ✓ Can the process be reviewed?
- ✓ Where does human judgment enter the decision?

Better intelligence isn't just powerful. It's understandable, explainable and defensible.

FROM DATA TO DECISION

One connected approach can transform complex information into actionable intelligence.

DEFINITIVE DATA

Relevant, verifiable information..

CONNECTED INTELLIGENCE

Connect identities, entities, relationships and risk.

PURPOSE-BUILT AI + ANALYTICS

Improve precision, scale and insight.

EXPLAINABLE INSIGHT

See the information and evidence supporting an insight.

HUMAN JUDGMENT

Give professionals context to evaluate and act.

GOVERNED DECISIONS

Support transparency, oversight and audit readiness.

When the Stakes Are High, Precision Matters

In government, an inaccurate signal can create unnecessary work, add friction for legitimate residents, divert attention from higher-risk activity or affect decisions involving essential services and public resources.

The goal isn't more AI. It's the right intelligence, applied to the right problem.

By combining trusted data, connected intelligence, advanced analytics and AI, agencies can better distinguish meaningful signals from noise—helping improve precision, focus resources where they matter most and support better-informed decisions.

See what matters.
Understand why it matters.
Act with confidence.

Intelligence for Decisions That Matter.

BUILT TO BE EXPLAINED

When decisions may need to be reviewed, intelligence needs more than an answer.

Government decisions may face scrutiny from program leadership, auditors, regulators, oversight organizations—or the people those decisions affect.

When transparency and accountability matter, agencies need context and evidence that help them understand what supports a result.

That's where explainability becomes operational.

EVIDENCE

Substantiate what was surfaced.

TRACEABILITY

See information lineage and provenance.

EXPLAINABILITY

Understand the information and factors supporting an insight.

GOVERNANCE

Maintain appropriate controls and human oversight.

AUDIT READINESS

Support review, compliance and oversight.

AI doesn't replace the decision-maker.

It powers better intelligence for the people who do.
