Accurate household composition is critical to eligibility determination, payment accuracy and program integrity. LexisNexis® Risk Solutions provides a customized batch analysis that helps agencies identify individuals who may be associated with SNAP households but are not reflected in agency records. The analysis can be tailored to align with state-specific eligibility, program integrity and case review requirements, helping agencies leverage trusted identity, address and association insights within existing workflows.

Using address, identity, property and relationship-linking insights from multiple authoritative data sources, agencies can more efficiently identify cases that may warrant additional verification and review. Results help agencies prioritize resources, strengthen program integrity efforts and support more informed eligibility decisions.

The Challenge

Unreported household members and income can contribute to inaccurate benefit determinations, overpayments and increased case review workloads. Verifying who is actually residing in and contributing to a household remains a challenge for many agencies. Determining who is actually living in and contributing to a household often requires connecting information across multiple sources that may not be readily available through traditional verification methods.

The **2026 LexisNexis® Risk Solutions True Cost of Fraud™ Study for Supplemental Nutrition Assistance Program (SNAP) Agencies and Integrated Eligibility Systems (IES)** found that **58% of participating agencies reported household composition data was difficult to access when assessing application fraud**. The study also found that eligibility fraud can include misreporting income, household size, residency or employment status to obtain or increase benefits. Additionally, agencies that reassess household composition and other eligibility factors are more likely to strengthen payment accuracy and program integrity efforts.

HOUSEHOLD COMPOSITION INSIGHTS DELIVERED

The customized batch analysis can help agencies:

- ✓ **Identify individuals** potentially associated with a reported household address
- ✓ **Surface household relationship** and identity-linking insights
- ✓ **Highlight property ownership** indicators associated with household members
- ✓ **Provide vehicle ownership** information that may support case review
- ✓ **Identify additional address** and association indicators that may warrant further verification
- ✓ **Identify prioritized cases** for further agency review based on multiple household composition indicators

Simple to Implement

LexisNexis Risk Solutions conducts the analysis using configurable business rules aligned to agency requirements and delivers prioritized results for agency review, requiring little to no system changes, additional staffing or operational disruption. The process is designed to complement existing eligibility, program integrity and fraud prevention workflows while helping agencies focus resources where further review may be needed. The methodology can be adapted to support varying state policies, review criteria and program integrity objectives.

Designed to Support Agency Decision-Making

The analysis does not make eligibility, fraud or adverse action determinations. It provides additional household composition and association insights to support agency review and verification processes. It provides additional information to support agency review, payment accuracy, fraud prevention and program integrity efforts. Agencies maintain responsibility for all verification activities, eligibility decisions and benefit determinations.

Learn how a **customized statewide household composition analysis** can help your agency uncover potential eligibility discrepancies, improve payment accuracy and strengthen program integrity efforts.
