

LexisNexis® Spectrum Risk Assessment for DMVs

Start with a Clear Understanding of Identity and Credential Risk

As DMVs modernize digital services, expand online transactions, support REAL ID, and prepare for mobile driver's licenses (mDLs), understanding where identity and credential risk exists has become increasingly important.

LexisNexis® Spectrum Risk Assessment provides an executive-level assessment of identity and credential risk across DMV operations—helping agencies identify potential vulnerabilities, prioritize improvement opportunities, and strengthen decision-making before investing in new initiatives.

A Smarter Way to Assess Risk Across DMV Operations

Spectrum Risk Assessment helps provide a structured view of identity and credential risk across:

**Applicants and
credential holders**

**Identity proofing and
application workflows**

**Digital and in-person
transaction channels**

**Third-party partners
and supporting data**

By bringing these risk indicators into a single assessment, agencies can gain a clearer understanding of where exposure may exist and where operational improvements may have the greatest impact.

Why It Matters

A clearer understanding of identity and credential risk helps support:

- ✓ Faster, more informed decision-making
- ✓ Reduced manual review opportunities
- ✓ Stronger REAL ID and mDL readiness
- ✓ More efficient modernization planning
- ✓ Greater confidence in identity assurance

Understanding Risk Across the DMV Ecosystem

Identity Assurance

Assess identity proofing processes using trusted data, document validation, and risk indicators.

Credential Integrity

Identify duplicate identities, inconsistencies, and patterns that may indicate misuse or fraud.

Identity Risk Analysis

Surface indicators such as deceased identities, residency conflicts, multi-state duplication, and known fraud associations.

Fraud Detection

Evaluate potential document fraud, synthetic identities, and other identity manipulation risks.

Transactions and Channels

Assess online and in-person transaction activity to identify anomalous behavior and suspicious patterns.

Cross-Channel Visibility

Understand how risk may span digital services, field offices, and supporting systems.

From Assessment to Action

Assess Analyze identity, credential, and transaction data to identify areas of elevated risk.

Prioritize Highlight where additional investigation, workflow improvements, or stronger identity controls may provide the greatest value.

Inform Provide executive insight that supports modernization planning, operational improvements, and ongoing identity assurance.

Spectrum Risk Assessment Can Help Agencies

Understand where identity risk exists

Prioritize improvement opportunities

Support REAL ID and mDL planning

Reduce reliance on manual reviews through better insight

Strengthen identity assurance strategies

Executive Insight for Better Decisions

Effective modernization begins with understanding current risk.

Spectrum Risk Assessment can provide DMV leaders with a compiled view of identity and credential risk across applicants, credentials, and supporting data—helping agencies make more informed operational and strategic decisions.

Outcomes Supported by the Assessment

- ✓ Visibility into identity and credential risk
- ✓ Prioritized operational improvements
- ✓ Improved credential integrity
- ✓ Improved readiness for REAL ID and mDL initiatives
- ✓ More informed modernization planning
- ✓ Increased confidence in identity assurance strategies

Start with Insight

Before changing systems or processes, understand where identity and credential risk exists today.

LexisNexis® Spectrum Risk Assessment can provide the executive-level visibility needed to prioritize improvements with confidence.
