Acquiring and maintaining more accurate consumer data is critical to making profitable business decisions, reducing costs and enhancing customer sentiment. Inaccurate or outdated data could lead to missed opportunities, increase risk for non-compliance and damage relationships with consumers.

Even with reliable data, businesses of all types need to be able to aggregate and organize it, discover actionable insights and use them to enhance their understanding of consumers, stakeholders and prospects.

To get the most out of consumer data, organizations should be constantly looking to refresh, expand and evolve data over time to uncover relevant, predictive insights that can help improve outcomes across the business.

LexisNexis® Consumer Data Management combines our expansive data coverage of nearly every U.S. adult, patented linking technology and high-power computing platforms to allow you to work with more up to date data. With clean, relevant data you can leverage industry-leading tools, capabilities and practices to increase the value of their data assets and extract increased value from them.

Bad data can impact every piece of your business

Operational
- Inaccurate, outdated or duplicative customer data can lead to wasted time and resources

Marketing
- With incomplete customer profiles and demographics, marketers may miss valuable opportunities

Compliance
- Lacking good data and actionable insights can increase the risk of non-compliance

Fraud and Identity
- Poor identity resolution and linking can lead to issues including re-occurrence and "tumbling"
How LexisNexis Consumer Data Management works:

Our solution combines the power of our vast data assets, patented LexID® consumer unique identifier and proprietary HPCC Systems® computing platform to connect the right records to the right consumer profiles to deliver a more holistic single view of an individual.

Establish a source of truth with cleansed, linked, relevant data — so you can make confident decisions that move your business forward.

Robust consumer datasets

- First and Last Name
- Address
- Address Type
- Social Security Number
- Date of Birth
- Deceased Flags
- Telephone Numbers
- Emails

Operational tools

- **LexID® Confidence Score** — Score relating to resolution of identity
- **Element Match Codes** — Delineates or describes the difference between the customer input data and LexisNexis Risk Solutions best data
