

Say “yes” with confidence -
seamlessly respond to risk
while staying focused on
the customer experience

Accelerate the identification of valuable customers and prevent fraud with a multi-layered, risk-mitigation approach

With the rise of digital transformations, the insurance environment has changed more in the last decade than in the decades prior. Now, insurers must keep up with advances in technology, meet evolving consumer expectations and navigate new distribution channels, all while defending themselves and their customers from cybercriminals and fraudsters. Additionally, carriers are challenged to provide a quality customer experience while adding the right amount of friction to prevent fraud. Today's "post-breach" world means insurance carriers can no longer rely on legacy approaches to ensure data security.

At LexisNexis® Risk Solutions, we use the power of data and advanced analytics to help insurers make better, timelier decisions in a world filled with hidden risks. Effective risk management begins the moment a proposed insured appears on your radar – online or offline. Are there discrepancies on the application? Do all the components fit together? Is the proposed insured even a real person? Insurers need more sophisticated, layered approaches to dealing with these types of challenges.

An effective Identity Access Management (IAM) program is key to managing digital identity risk, combatting cyber fraud and balancing both customer expectations and experiences. The LexisNexis® ID Compass Platform provides identity verification, authentication, and risk management. With access to accurate data at the right time, carriers can say "yes" with confidence.

Identity Access Management Products

LexisNexis® ThreatMetrix® leverages unique ThreatMetrix ID™ technology to connect the dots between the myriad pieces of information an individual creates as they transact online, then develops a unique digital identifier for that individual—allowing you to recognize good, returning customers and prevent account takeover. By bringing digital identity intelligence to life, the solution helps carriers elevate fraud and identification decisions from a device to a user level, while uniting offline behavior with online intelligence. With deep insight into 1.4 billion anonymized user identities, ThreatMetrix ID delivers the intelligence behind 75 million daily authentication and trust decisions to differentiate legitimate customers from fraudsters in real time. Customers report a 60-90% reduction in online fraud and 70% reduction in interdiction rates.

^Based on customer data

Identity Fraud Stats

14.4 Million consumers were the victims of identity fraud in 2018

Losses from new account fraud increased from **\$3 billion in 2017 to \$3.4 billion in 2018**

Exposed Consumers' Personally Identifiable Information (PII) records jumped from **197M in 2017 to 446M in 2018**

* 2018 End-of-Year Data Breach Report (Rep.). (2018). San Diego, CA: Identity Theft Research Center. doi:<https://www.idtheftcenter.org/2018-end-of-year-data-breach-report/>

LexisNexis® InstantID® combs through billions of public records to instantly verify consumer identities, spot potential fraud and identify theft, and automatically flag discrepancies in applications. By combining verification, validation and risk detection processes, InstantID delivers the reliable information carriers need to help reduce errors, processing time and fraudulent activity. Identity verification through InstantID allows you to better manage identity-related expenses, make more informed workflow management decisions and ensure application accuracy.

LexisNexis® Phone Finder combines authoritative phone data and extensive dynamic phone metadata with one of the industry's largest repository of identity information to deliver relevant, rank-ordered connections between phones and identities. Along with high quality metadata such as line type, carrier details, active status, Porting and Spoofing, Phone Finder returns configurable risk indicators that can be completely customized to business-specific risk thresholds to further streamline key decisioning process and authentication workflows.

LexisNexis® One-Time Password offers a time-sensitive, unique random passcode via SMS message, email or voice call and is ideal for companies that are interested in providing a multi-factor authentication solution for their customers. No hardware (electronic fob, etc.) other than the user's existing phone or personal computer is required. This easy-to-use, easy-to-implement solution for authenticating remote users can be implemented with minimum disruption and cost, while at the same time protecting your system against identity theft, weak passwords, password reuse and session-based attacks.

LexisNexis® InstantID® Q&A is a real-time, interactive knowledge-based tool that provides further verification that a customer is who he/she claims to be. Using more than thirty years of unique identifiers, InstantID Q&A generates a multiple-choice questionnaire based on robust data sources. This versatile authentication solution offers single sign-on for those organizations with large call centers. It can also be integrated into your system to be used online, in-person and via a mobile phone.

Insurance carriers need a **multi-layered solution in place** across a wide variety of access points to provide appropriate protection for their businesses and their customers.

LexisNexis® ThreatMetrix®
Near real-time analysis of millions of transactions across billions of devices

LexisNexis® InstantID®
Instant and complete identity verification

LexisNexis® Phone Finder
Relevant, rank ordered-connections between phones and identities

LexisNexis® One-Time Password
Easy-to-use authentication code sent to a device in the consumer's possession

LexisNexis® InstantID® Q&A
Additional layer of interactive, knowledge-based authentication
