LexisNexis<sup>®</sup> Risk Solutions Millennial Study Privacy vs. Customer Experience

### The millennial customer: privacy vs. customer experience.

How much friction will Millennial customers tolerate in transacting with communications companies, banks, payment providers, and retailers?

The findings offer valuable insight into millennials' attitudes on information sharing and authentication preferences to enable you to customize identity proofing processes for a better customer experience.

# LexisNexis retained KS&R, a global market research firm, to conduct a research study on millennials' behaviors and attitudes on information sharing and authentication preferences.

The methodology of this study comprised:

- Comprehensive survey of 2,804 Millennials, deployed during April-May 2016 across 7 markets: US, UK, Germany, Mexico, Brazil, Hong Kong and Malaysia.
- Respondents represented both younger (18-24 years old) and older (25-34 years old) Millennials.
- The overall margin of sampling error is +/- 1.85% at the 95% confidence level.
- Data reflects the population based on weighting to individual country Census.

### Inside the Millennial mind

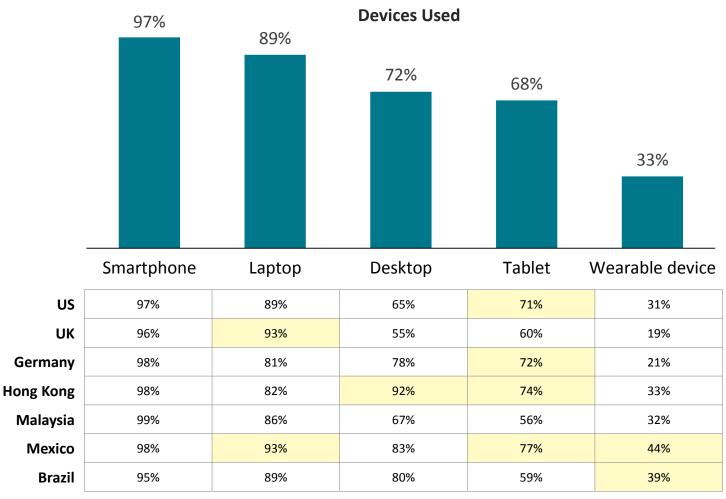

Smartphones and laptops are ubiquitous among Millennials across markets. Tablet use varies, while wearables is still emerging in most countries.

On average, they use 3 – 4 different types of devices.

Those in the UK and Mexico are more likely than others to use laptops, while those in Hong Kong have higher desktop usage.

Tablets are prevalent in most countries.

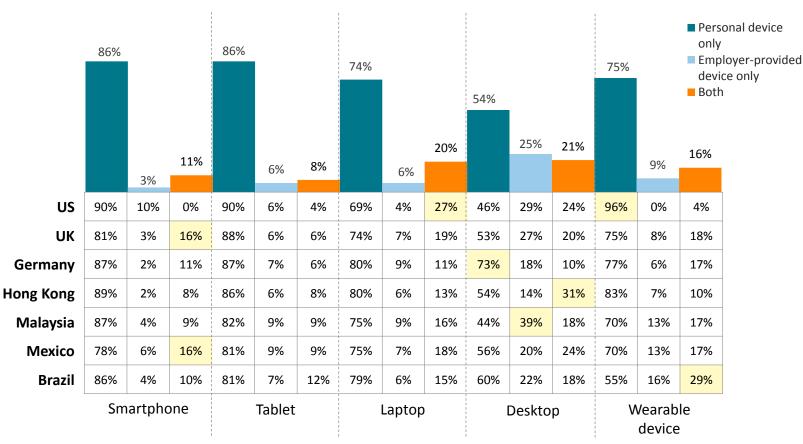

Wearables use is still emerging, though is highest in Mexico and Brazil.

## Most devices, across countries, are personal (not provided by an employer).

Where there is a higher likelihood to have both personal and employerprovided devices, this is more often for desktops within many countries.

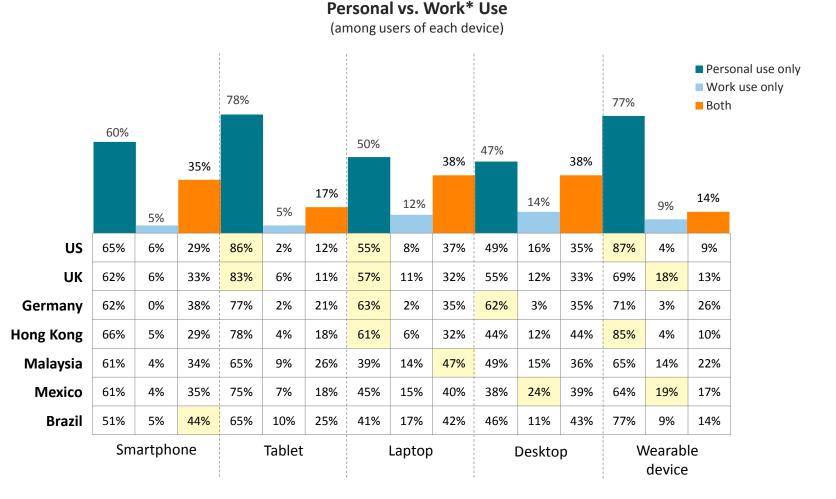

## However, a number are using these personal devices for both business and personal activities.

Among smartphone users, Brazilian Millennials are more likely than others to use this device for both personal and business.

Tablets are used more for personal activities in the US and UK.

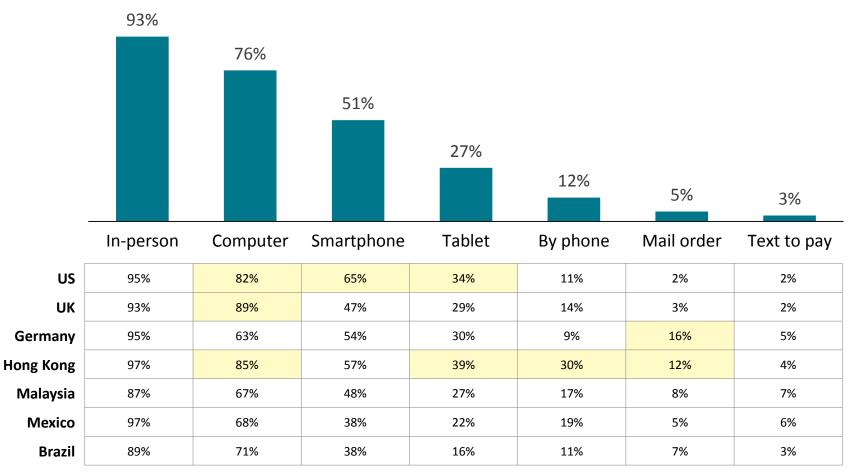

When Millennials shop, they do so in-person <u>and</u> remotely. The computer is the primary remote shopping device, particularly in the UK, Hong Kong, and US.

Smartphone shopping is more prevalent among US Millennials.

M-commerce via a tablet is limited among Millennials across markets.

Shopping by phone is less common overall, but more likely among Hong Kong Millennials than others.

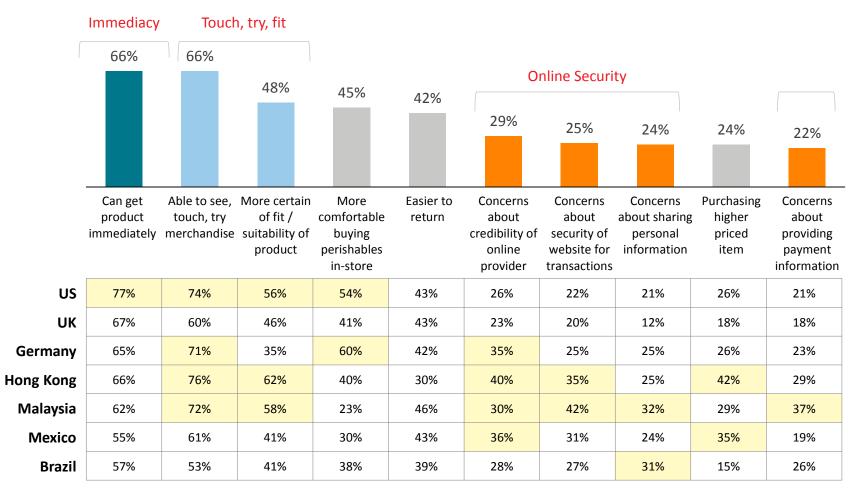

RISK SOLUTIONS

#### In-person shopping is driven more by immediacy and ability to see merchandise than by concerns about online security, particularly in the US.

Millennials in Germany, Hong Kong, and Malaysia are also eager to see merchandise in person, but also have more concerns with provider credibility, website security, and/or sharing of information than others.

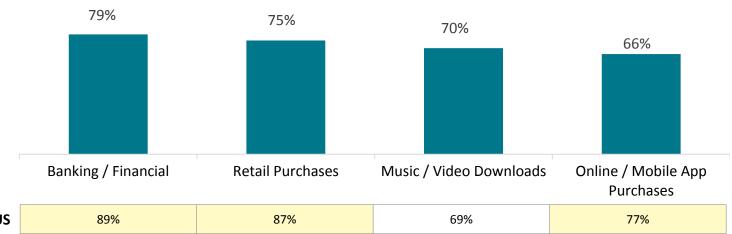

# US and UK Millennials are most active with remote activities, including being more engaged with both financial and retail transactions than others.

That said, other Millennials are actively conducting such transactions, but not among quite as many as in the US and UK.

Remote banking is most common among US, UK, Hong Kong, and Malaysian Millennials.

US Millennials are also heavy online / mobile app purchasers.

(among users of each device)

US	89%	87%	69%	77%
UK	83%	83%	65%	61%
Germany	68%	78%	62%	61%
Hong Kong	80%	64%	73%	61%
Malaysia	79%	49%	71%	53%
Mexico	72%	64%	73%	64%
Brazil	71%	64%	72%	56%
	L			

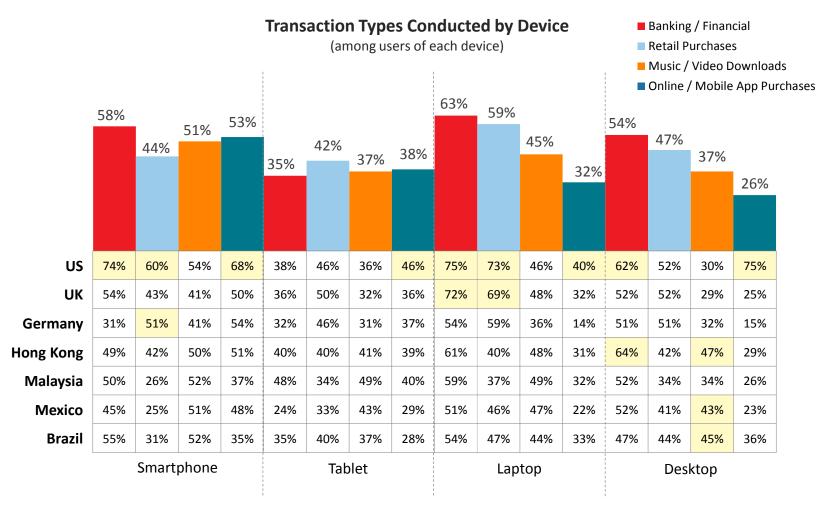

H

## US Millennials are more likely than others to conduct banking, retail purchases, and app purchases on most devices.

Across most markets, tablets are used less often for banking and / or retail purchasing.

Outside of the US, there are few significant differences in Millennial behavior towards using certain devices for certain transactions. Where this differs, German Millennials appear more with regards to using a mobile device (smartphone, tablet) for financial transactions.

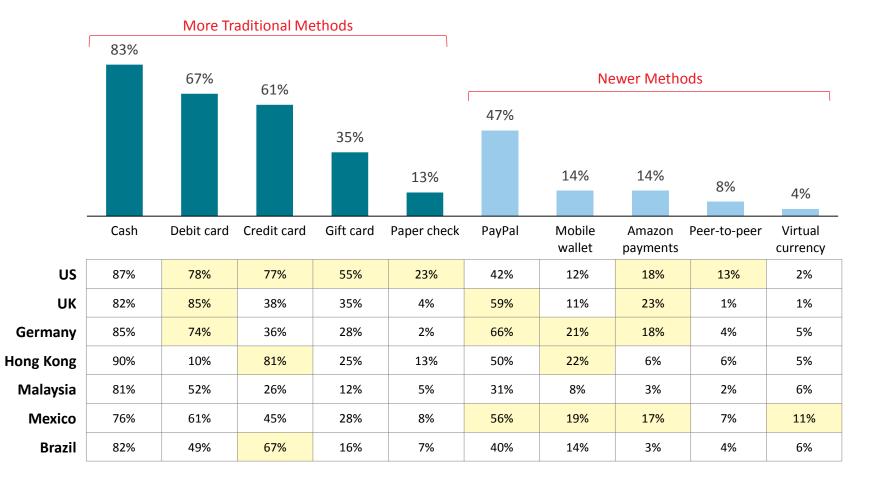

### Millennial payment methods differ by region.

Debit card use is more prevalent in the US and Europe

PayPal is more prevalent among European and Mexican Millennials, while other 3<sup>rd</sup> party methods are still emerging across markets.

Malaysian Millennials are a bit of a wild card with payment methods. There is no sizable majority for non-cash methods tested, which suggests that they are varied in terms of remote payment methods or are using further methods not tested or explicitly listed in the survey.

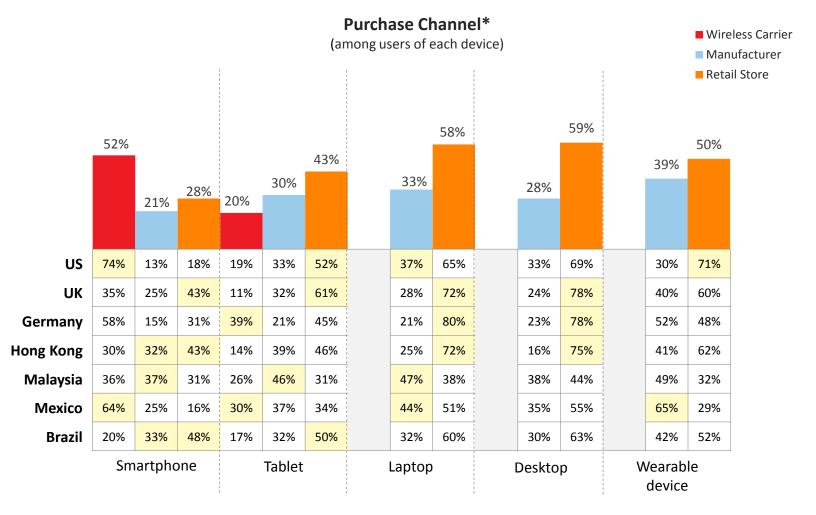

#### **Payment Methods**

## Channel use varies by region / country for Millennials' purchases of different devices.

As the North American model, US and Mexican Millennials are more likely than others to purchase smartphones through the wireless carrier. The Retail channel is more prevalent for smartphones in the UK, Hong Kong and Brazil.

For other devices, channels tend to vary by region. Retailers are Millennials' choices (options) for computers in the US, Europe and Hong Kong, while channels are mixed for these devices in other markets.

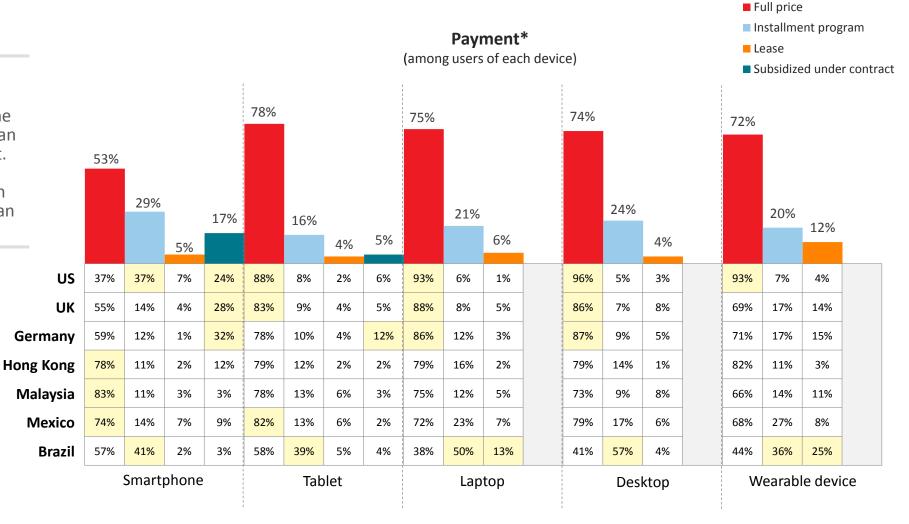

## US, UK, and German Millennials are more likely than others to pay full price for tablets, laptops, and/or desktops.

Hong Kong, Malaysian, and Mexican Millennials are more likely to pay full price for smartphones, while those in the US, UK, and Germany are more likely than others to subsidize them under contract.

Brazilian Millennials are more likely than others to purchase their devices under an installment program.

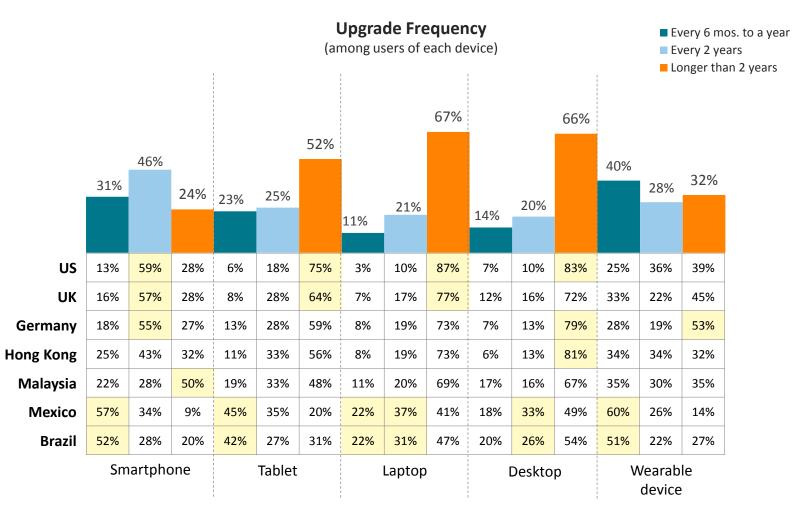

## Except for Malaysia, Millennials across markets are more likely to swap their smartphones sooner than other devices.

Brazilian and Mexican Millennials are more likely to swap / upgrade their devices sooner than Millennials in other markets.

US and UK Millennials wait longer than others to upgrade their tablets and laptops.

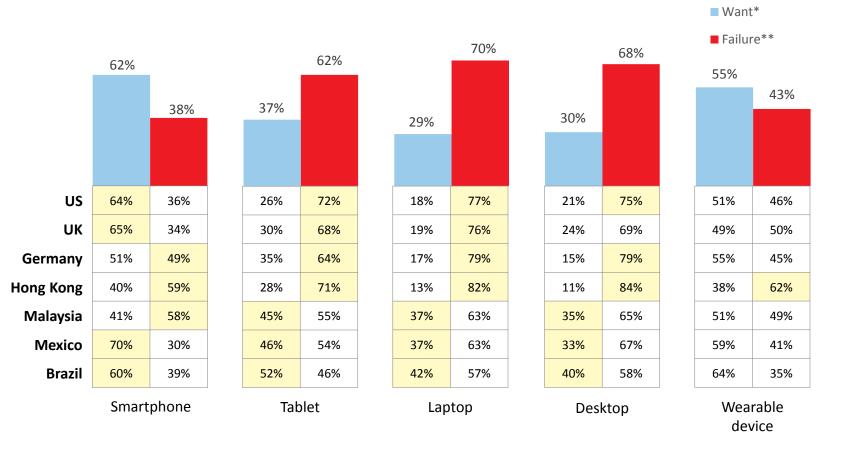

# Brazilian and Mexican Millennials are more likely than others to upgrade their tablets , laptops, and desktops out of want (rather than need) .

US and UK Millennials join them in wanting the latest smartphone.

US, UK, German, and Hong Kong Millennials tend to wait until their other devices fail before replacing.

(among users of each device)

Q: What is your primary reason for replacing your device? \*Those who selected "Want latest model" or "Mobile contract allows" \*\*Those who selected "Device stopped working" or Device became obsolete"

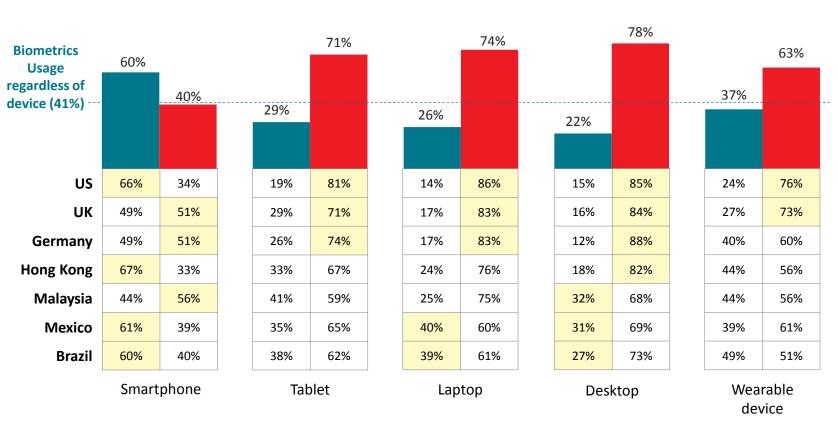

#### Is trust an issue?

## Biometrics use is fairly strong with smartphones, particularly among US, Hong Kong, Mexican, and Brazilian Millennials.

US, UK, and German Millennials are less likely than others to use Biometrics on other devices.

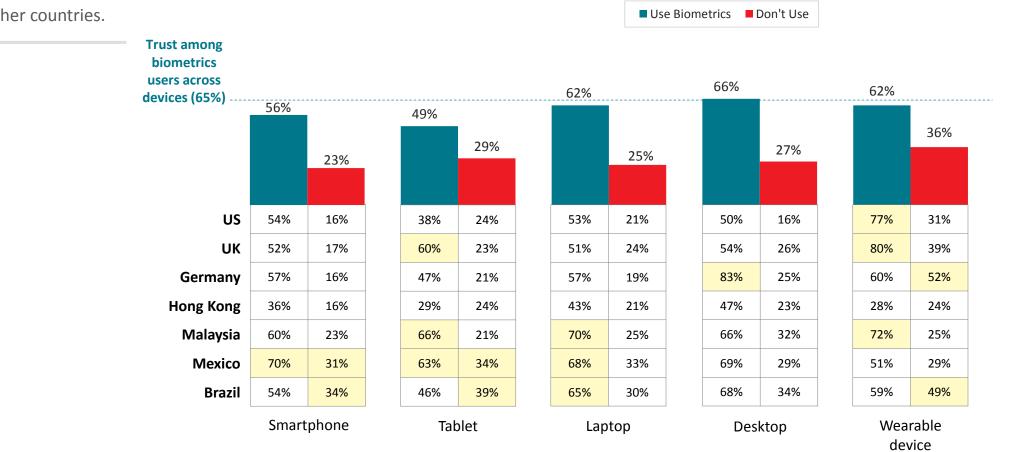

Biometrics Use

(among users of each device and where functionality exists)

## Biometrics trust tends to be stronger among Mexican and Brazilian Millennials than others, for smartphones, tablets, and laptops.

Trust levels are similar in other countries.

% Who Have Trust in Biometrics (% "yes", among users of each device)

### Malaysian, Mexican, and Brazilian Millennials are most worried about having their identity and debit/credit card info stolen.

Q: For each of the following statements, please indicate your level of agreement

## Distrust with retailers, communications companies and payment providers is sizeable, varying by country.

Retailers are most distrusted among Hong Kong, Malaysian, and Mexican Millennials.

Communications providers are somewhat more distrusted among European Millennials.

#### **Trust in Handling Personal Information**

### The types of information shared and with whom vary across countries.

Family Friend Support Personnel 54% 47% 44% 45% 43... 40% 37% 33% 24% 16% 11% 9% 9% 6% 7% 6% US 41% 49% 16% 7% 32% 58% 56% 35% 4% 9% 38% 3% 28% 4% 53% 7% UK 34% 57% 29% 11% 6% 53% 12% 6% 65% 20% 3% 12% 53% 31% 11% 12% Germany 34% 29% 44% 41% 24% 3% 60% 29% 10% 3% 28% 53% 4% 31% 56% 10% Hong Kong 57% 33% 11% 6% 64% 24% 12% 6% 60% 30% 9% 7% 55% 36% 12% 8% Malaysia 53% 37% 7% 6% 50% 35% 12% 7% 55% 34% 4% 6% 36% 52% 8% 11% Mexico 40% 43% 14% 29% 46% 10% 45% 36% 8% 10% 40% 40% 9% 7% 24% 15% 34% 16% 38% 38% 25% 8% 49% 35% 6% 10% 10% Brazil 49% 8% 41% 38% 15% Login credentials Login credentials Credit card # Bank account # (non-digital) (digital media)

#### Parties With Whom Information Has Been Shared

UK and Hong Kong Millennials are less likely than others to be comfortable sharing their information with anyone.

German Millennials are more likely than most others to be comfortable sharing information outside of their bank account number with family and/or friends.

US, Mexican, and Brazilian Millennials are likely to only share non-financial information with family and/or friends.

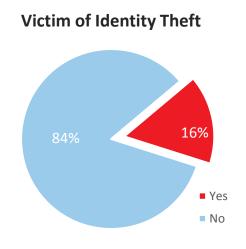

Not comfortable sharing with anyone

## Though only a minority of Millennials have been victims of identity theft, it is more common in the US.

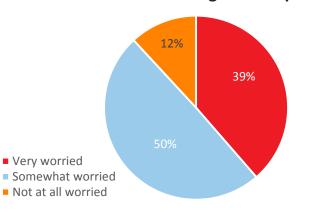

Even so, US Millennials who have been victims of identity theft are likely to be less worried about the long-term impact than others.

Malaysian and Brazilian victims are most worried about its impact.

	No	Yes
US	80%	20%
UK	91%	9%

Hong Kong	36%	56%	7%
Malaysia	73%	26%	2%
Mexico	51%	45%	4%
Brazil	78%	19%	3%

How much customer friction will Millennials tolerate?

## The convenience of storing credentials on a mobile device or in a browser is not a concern for all Millennials.

Hong US UK Germany Malaysia Mexico Brazil Kong On a mobile device 44% 45% 32% 27% 47% 57% 47% 45% In a web browser 43% 45% 44% 47% 41% 42% 35% 49% 34% Neither 36% 42% 50% 31% 24% 19% 33% Use of Password Manager 22% 25% 32% 46% 59% 46% 51% Yes - - - ▶ 64% ---78% 75% 68% 54% 41% 54% 49% No No

#### How Login Credentials are Stored

UK and German Millennials are less likely than others to seek the convenience of storing credentials on a mobile device or in a browser.

They, along with US Millennials, are also less likely to use a password manager.

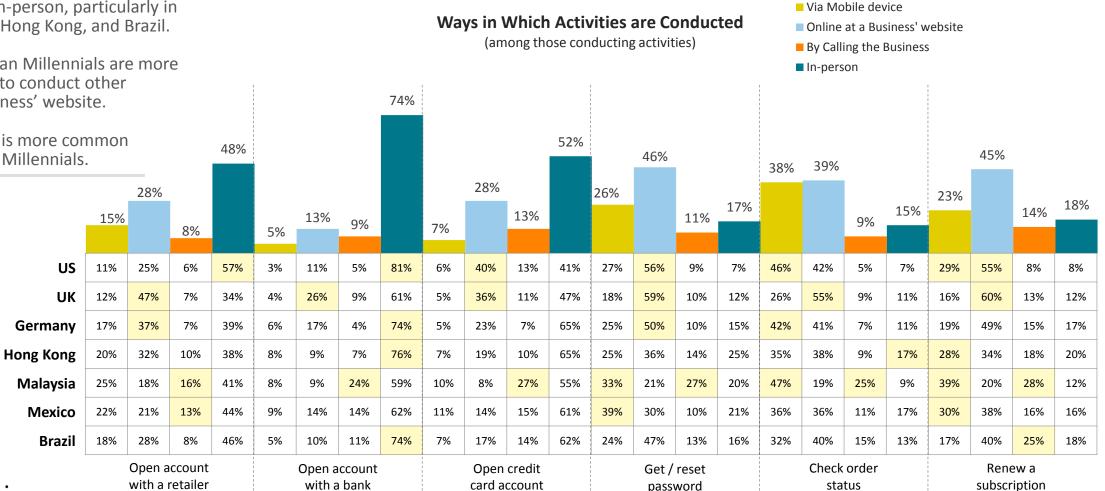

Q: Which of the following describes how you store login credentials? Q: Do you use a password manager or app where you store your passwords in an encrypted file?

### Different countries have different ways of conducting activities, depending on their perceived risk levels.

Activities that involve higher risk, such as opening a bank account, are more likely to be conducted in-person, particularly in the US, Germany, Hong Kong, and Brazil.

US, UK, and German Millennials are more likely than others to conduct other activities at a business' website.

Calling a business is more common among Malaysian Millennials.

### Concerns with information security and lack of trust with providers drives Millennials to prefer opening accounts in person, particularly in Malaysia.

	% Answering "Strongly Agree/Agree"	US	UK	Germany	Hong Kong	Malaysia	Mexico	Brazil
When opening a new account, I prefer t do it in person	60	<b>%</b> 60%	50%	61%	55%	66%	57%	63%
When opening a new account, I find tha it's easier to do it in person	58%	6 58%	49%	60%	51%	69%	62%	57%
I find it intrusive to provide financia history information for identity verification	55%	48%	53%	55%	37%	66%	58%	63%
More cautious when viewing my bankin information on my mobile device	g <b>49%</b>	42%	48%	51%	59%	72%	55%	53%
Prefer more peer-to-peer transaction	31%	21%	21%	24%	32%	48%	43%	41%
Willing to access my banking informatio through a social media account online o through a mobile device		24%	22%	17%	21%	39%	39%	41%
	% Answering "Strongly Disagree/disagree"							
Willing to access my banking informatio through a social media account online o through a mobile device		47%	46%	56%	39%	35%	28%	33%

US, UK, and German Millennials are least willing to access banking information through a social media account.

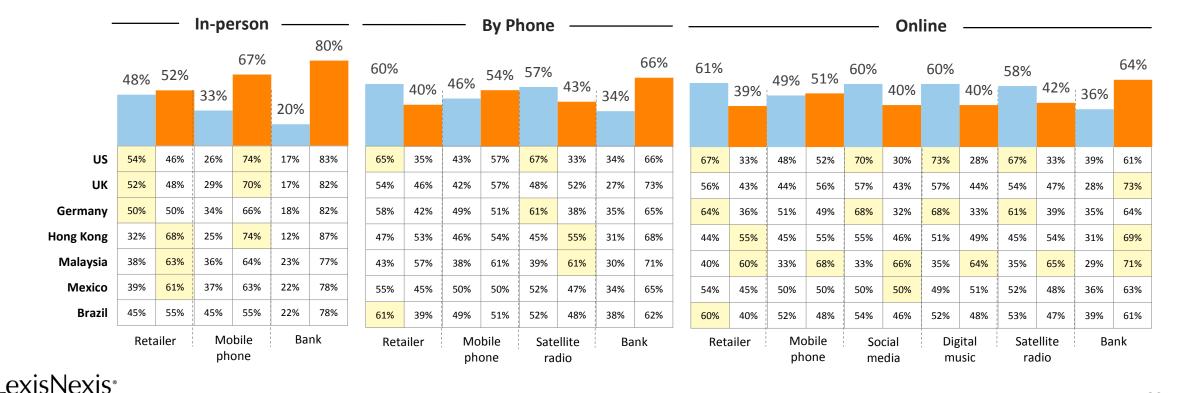

## Millennials are similarly willing to spend longer to open a bank account in-person than they are for other accounts via other channels.

US and German Millennials tend to have less patience than others when opening accounts outside of banking, capping their time willingness at 10 minutes. Millennials in Hong Kong, Malaysia, and Mexico are willing to spend longer for most activities.

#### **Time Willing to Spend Opening Account**

(among those who would open account by each medium)

- Up to 10 minutes
- Up to 15 minutes or more

### Reasons to terminate new account opening vary by country.

Both amount / type of requested information can cause termination of a new account opening, particularly among US, UK, German, and Hong Kong Millennials

Time is more of a factor for Malaysian, Mexican, and Brazilian Millennials.

UK and Germany are more likely than others to create stand-alone accounts, while most others will link to existing accounts in certain situations.

Brazilian Millennials are more likely to link to existing accounts in all situations.

### o terminate new account opening vary by c

 Q: When opening a new account online, do you link to existing accounts as a means of creating a profile in a new account?

#### Conclusions

### Millennials are very digitally connected in most study markets, though US, Hong Kong, Mexican and Malaysian ones tend to be more power users than others.

- "Power user" means that Millennials in these four markets are using more devices to conduct more transactions than others, including retail shopping, banking and purchasing of online apps.
- US Millennials are also power users of music and video downloads across various devices.
- UK Millennials are more limited than others in terms of device use. And, while Brazilian and German Millennials tend to have as many devices as Millennials in other countries, they are not using as many of them to conduct remote transactions.

		US	нк	MEX	MALAY	BRA	GER	UK
	Smartphones	х	х	Х	X	х	X	х
Manalikaluta	Laptops	X	х	х	х	x	х	х
More Likely to Have Devices	Desktops		х	x	х	х	x

= Hiaher than other countries

### But regardless of being a "power user", Millennials across markets are similar in terms of having concerns about online / mobile security, a breach of their personal information and provider handling of it.

 While concerns about identity theft and payment information breaches from remote transactions is more heightened among Mexican, Malaysian and Brazilian Millennials, this is a concern for the majority of Millennials in other study markets as well.
 <sup>K</sup> Rating Agree

	Being worried about having their identity stolen through online/app-based/mobile activities, yet	Use online or mobile browsing for purchases and financial transactions.	Х	х	Х	Х	Х	х	х
	Realizing that companies need to ask for their information to protect them from identity theft and fraud, yet	Think twice before actually providing that information or will terminate if too sensitive	Х	Х		Х	х		х

# Further, there are similarities across markets in terms of Millennial limits on the amount of friction they will accept to verify identity and prevent fraud.

- Nearly all will terminate opening a new account if they feel that too much sensitive information is being requested.
- Biometrics is used by Millennials in varying degrees across study markets, though largely limited to smartphones. Trust in biometrics is often limited, with the exception being among Mexican and Brazilians.
- Millennials differ in terms of their patience when opening new accounts. US and German Millennials are less patient, while Hong Kong, Malaysian and Mexican ones are more patient. That said, there is commonality across markets in terms of being willing to wait longer when opening a bank account in-person.

As a result, there are many similarities between Millennials across markets in terms of attitudes and behaviors to online / mobile / identity security. Differences are more nuanced than stark.

#### **Similarities**

- All are digitally connected to online and mobile devices
- Most tend to own their devices; all use them for both business and personal
- If using biometrics, they tend to do so on their smartphones
- Identity theft, online security and breaching of payment information is a concern to most across countries
- Lack trust in financial services, retail, communications and payment provider organizations to handle their personally identifiable information (PII)
- Limited acceptance of friction
  - Very limited willingness to share their PII
  - Prefer to open bank accounts in person
  - Time and amount of sensitive information can cause them to terminate opening a new account

#### <u>Nuances</u>

- US, Hong Kong, Mexican and Malaysian Millennials are more "power users" than others
- Different devices used for different types of transactions
- US, Hong Kong, Mexican and Brazilian Millennials use biometrics more than others; Mexicans and Brazilians have more trust in this application
  - Malaysians, Mexicans and Brazilians are more sensitive to ID theft, online security and data breaching; while they are more likely to recognize need for companies to have their personal information, they are bothered by it as are others
- Germans and Malaysians are less willing than others to provide PII.
- Opening non-bank accounts online is more comfortable among US, UK and Germany

#### Stark Differences

- Use different payment methods for remote purchasing
- Different levels of patience when opening new accounts
  - US and German Millennials have less patience
  - Hong Kong, Mexican and Malaysian ones have more patience.

#### Recommendations

### The identity authentication process should be different based on not just the type of transaction experience (in-person, online, by phone), but also accounting for nuanced sensitivities and device use by market.

- Not all transactions have the same risk level, nor are perceived the same among different Millennials.
  - Risk levels vary by channel (i.e., in-person versus mobile), value (i.e., high value vs. commodities) and device (online versus mobile).
    The same devices are not used consistently across markets by Millennials; US, Mexican, Hong Kong and Malaysian Millennials use more devices for more things and are therefore more exposed to risk.
- At the same time, Millennials differ in terms of patience and sensitivity towards managing this risk.
  - Patience levels for identity validation vary; companies may lose US and German Millennials if they have to wait too long.
  - Sensitivity around identity theft and protection varies: Malaysians, Mexicans and Brazilians are most sensitive about these issues, though have a similar discomfort as others with regard to providing information to verify identities. This makes them even more sensitive.
  - Therefore, the authentication process needs to have flexibility across markets to ensure the optimal customer experience based on those in-country nuances. Companies will need to minimize friction by adjusting the degree to which they ask for / use customer information across different transactions (i.e., pick their battles).

Let LexisNexis<sup>®</sup> Risk Solutions help you adjust your authentication flow based on risk profiles, so that you can focus on delivering the right customer experience every time.

### It will be important to limit the amount of PII that is requested of Millennials for identity protection, particularly among Germans, Malaysians, Mexicans and Brazilians.

- Requests for too much or too sensitive information can be a deal-breaker for Millennials across markets, but it could happen more quickly and easily among those who are most sensitive to identity theft and company PII handling.
  - Even though they recognize the need for companies to have their personal information, the lack of trust with how companies handle it could become a barrier to their willingness to provide sensitive information.
  - □ To the degree available, pre-populated data could reduce this challenge.
  - Enabling access to existing accounts through one-time passwords is acceptable to Millennials except for Malaysians and Germans.
  - Biometrics is an additional option to reduce friction, particularly among US, Hong Kong, Mexican, and Brazilian Millennials. It could be an option with others to the degree there is more transparency around the types of personal information that Millennials need to give (or education that they can provide less information and still get the same or better identity protection).

Let LexisNexis<sup>®</sup> Risk Solutions tailor the authentication experience with a layered approach, such as One Time Password with Knowledge Based Authentication or with Biometrics linked to other identity proofing solutions. These will help detect true fraud that reduces customer friction and ensures customer loyalty.

# To further lessen friction, companies will need to supplement their information with data from external providers who specialize in identity verification / validation.

- As noted, it will be challenging for companies to gather much data from Millennials which would prove useful towards developing a complete profile of them.
- As a result, reliance on more robust external data including the underserved / underbanked will be essential to developing profiles of these customers.

Let LexisNexis<sup>®</sup> Risk Solutions provide richer and more accurate profiles of consumers than you can get from other solutions in the market today. This includes giving you more information on the underserved / underbanked population (inclusive of a large portion of millennials with a limited credit footprint).
